Block Party Challenge

블록 파티 챌린지

Dname's challenge shorts — now playable with Dname, live.

One big screen · everyone on their phone · no app, no account

Hack the Audience 2026 · Creator partner: GodDot / Dname

The audience already plays — in comments

- Every Dname short is a viewer-prize game: find the diamond, greed game, telepathy, escape the lava
- Median ≈ **1.7M views** over his last 50 shorts (top 5.5M); recent uploads get fewer, so our model plans with 300K–800K
- Tagline: **"Subscribe and join the game!"** — but today fans can only watch
- Korean kids & teens (assumed; no public demographics) → phones, classrooms, friend groups

Counts from YouTube, 2026-11-06

Why now

- **49.1%** of Korean students (grades 4–12) watch short-form video **every day** (0.2% in 2022). Average online video: 200 min/day
- YouTube Shorts: used by **93.4%** of Korean short-form users
- YouTube Live added minigames (Sep 2025), but only the *creator* plays. In Block Party, **every viewer plays on their own phone**

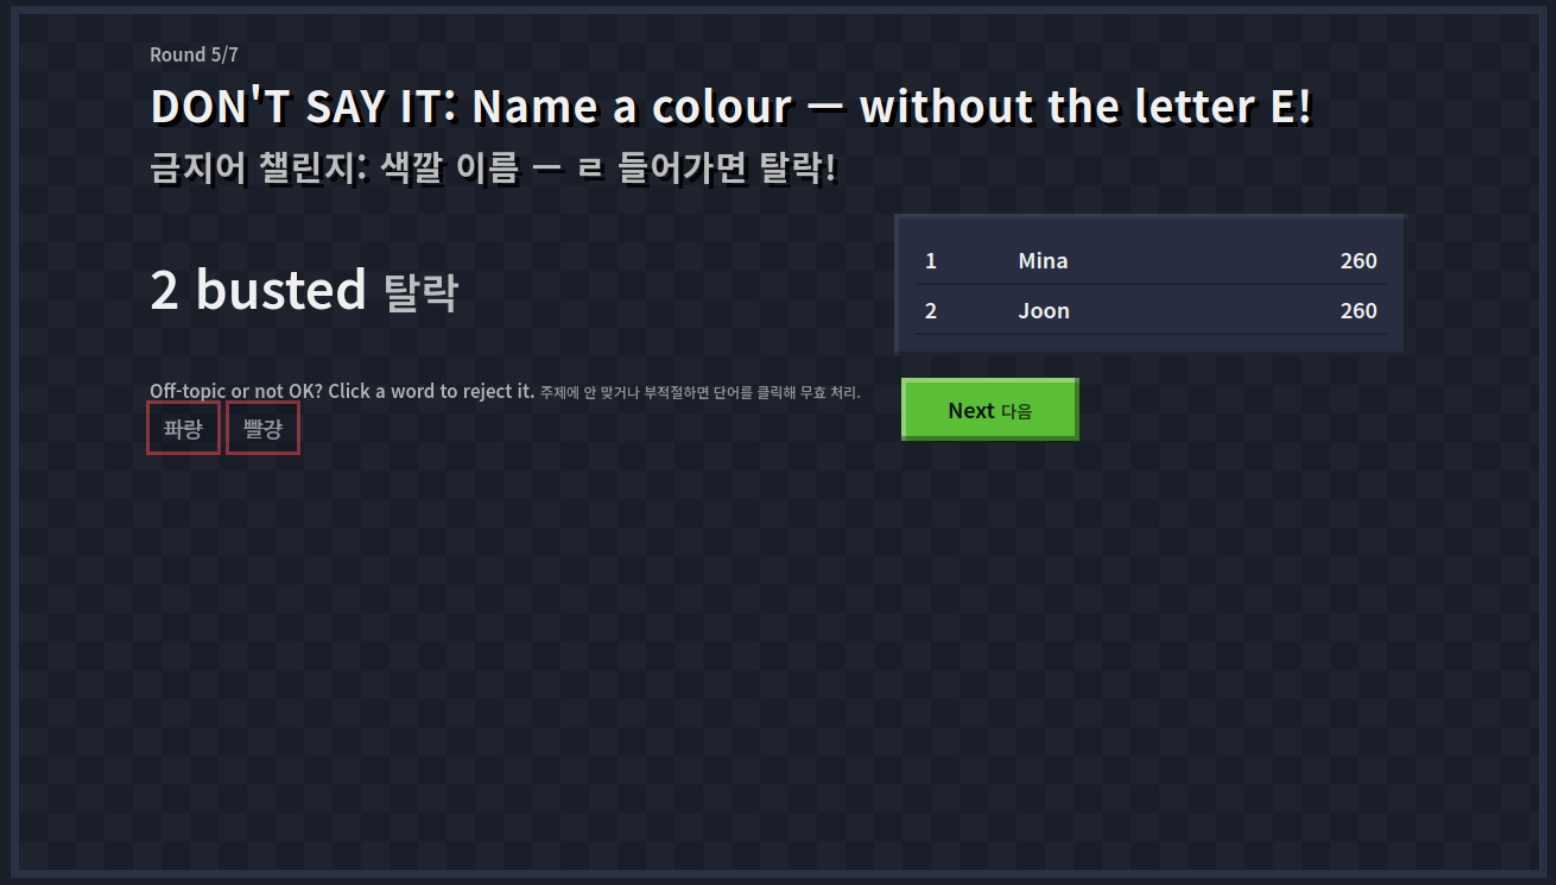

Korea Press Foundation 2025 teen media survey (Korea Times, 2026-01-07) · KOCCA 2025 content usage survey · TechCrunch 2025-09-16

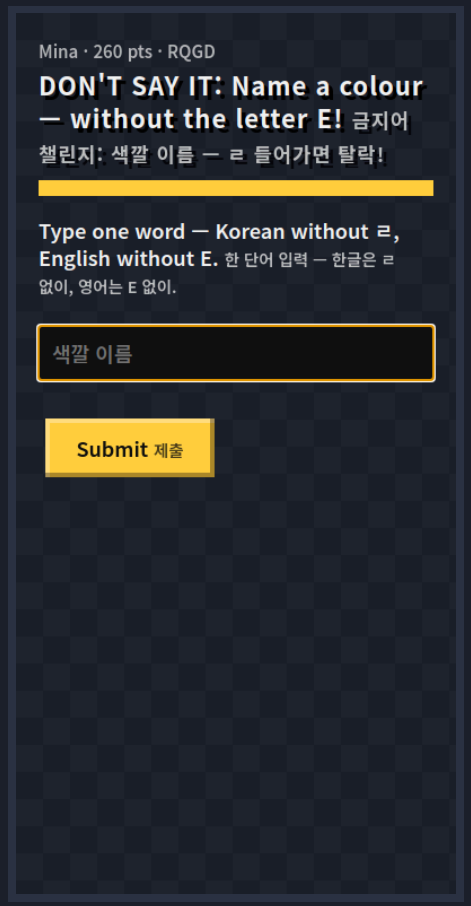

How it plays

- Host screen shows a code + QR
- **200 phones** tested in one room
- 7 rounds × 12–15 s, server-timed
- Telepathy · Greed · Find the Diamond · Block Telepathy · **Don't Say ㄹ** · Lava
- Weekly season top 10 · Daily Challenge · sponsor banner (free entry)

His #1 short, playable: "Don't say ㄹ"

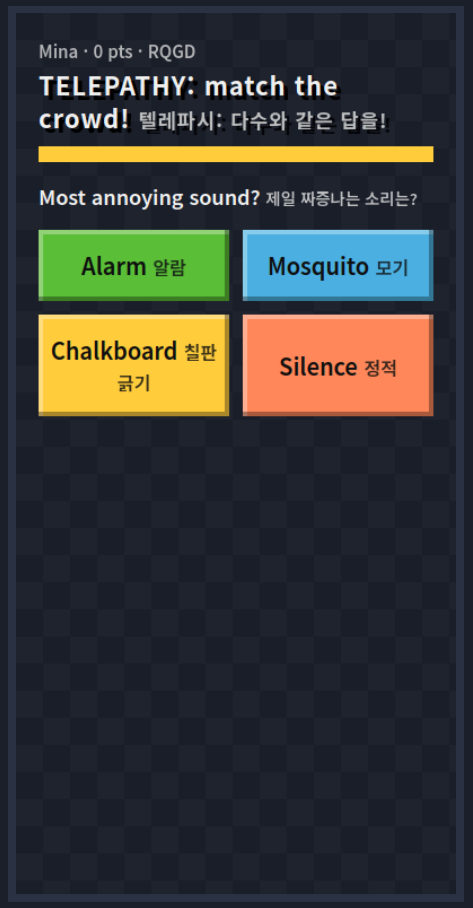

Typed one-word answers · ㄹ checked inside every syllable (라, 를, 닭) · kid-safety blocklist · streamer can veto any word

Big screen + phone

The flywheel: game → video → game

- **Dname version** (`/?creator=dname`): Korean-first, branded "디네임 파이널" lobby
- **Recording mode** (`/?overlay=1`): Dname records a weekly "Dname Final" played by viewers → his next short (also works live)
- The final becomes his next short: **one click makes a 9:16 recap video** of the episode (round highlights + podium) → new players join → next week's final
- **Daily Challenge**: same 5 rounds for everyone each day, scored against today's crowd, shareable result. Catches viewers whenever they watch
- Classroom & friend-group rooms keep it alive between uploads

Business model

Stream	Price	Notes
Free play	₩0	Growth engine
Fan Pass	₩4,900 / month	Private rooms, custom question packs, cosmetics, season badge
Cosmetics	₩1,000–5,000	No pay-to-win
Sponsored episodes	₩2M / episode (A; below the ~$2.5–25 per 1K Short views that rate guides quote)	Brand pays prizes; free entry, never player-funded
Group licence	₩9,900 / class / month	Jackbox-style format

Infra ≈ $1–5 per million player-episodes (estimate) → margin is set by payment fees, not servers.

Year 1, four scenarios

	Players / month (m12)	Year-1 gross	Dev team's 20%*
Conservative	2,000	₩1.9M ($1.4K)	₩0.34M
Recent reach (24K views/short, no sponsors)	700	₩3.4M ($2.5K)	₩0.62M
Base	22,900	**₩51M ($37K)**	**₩9.3M**
Optimistic	104,600	₩242M ($176K)	₩44M

* Hackathon terms: the winning team receives 20% of net revenue for 24 months; Dname + Extriver keep 80%.
Base: 2 shorts/month featuring the game × 800K views × 1% join, 30% monthly retention, 1% Fan Pass, 1 sponsored final/month. Sponsorship ≈ 40% of revenue → kids don't have to be the payers. All inputs are assumptions (A), replaced by the real join rate after the first Dname Final (docs/BUSINESS.md, tools/model.py).

Built to survive a creator shout-out

- Cloudflare edge: one Durable Object per room, hibernating WebSockets, alarm timers
- Load test: **200 phones**, full episode — p50 ≈ 0.2 s answer→reveal
- Status page (5-min checks) + email alerts · **hourly full-episode test in production**
- Versioned deploys + one-command rollback · daily leaderboard backups
- Kids' stream safety: nickname filter (EN/KO), no accounts, no chat
- Unit, end-to-end, browser UI and overlay tests
